The F6 error code means that the computer on the control didnt detect that the motor reached a high speed on the spin cycle, sometimes it thinks the washer didnt spin fast enough because of a loose wire connection either on the motor or the control boards (motor & machine control) if you find that the washer did actually spin at high speed (clothes dont come out sopping wet at the end of cycle) the wire connections or the motor control board will be the potential causes of the F6 error code.

Hitachi Washing Machine F6 Error - backpacker.com.br

The "F6" fault code indicates the control is unable to properly detect motor speed and it will shut down. If a failure occurs during high speed spin, the door will be unlocked after 3 minutes. Some of the causes are: Loose wiring connection between the motor and the motor control board or between the motor control board and the machine control board.

Disconnect the washer from the mains and remove the kick plate and top panel. There may be loose or dirty connections at the drain pump, pressure switch (on the right side of the rear panel), and the CCU (in the middle of the rear panel behind the wash tub). You may have a loose or dirty connection somewhere.
