Thus the solution of the partial differential equation is $u(x,y)=f(y+\cos x)$. To verify the solution, we use the chain rule and get $u_x = \sin x f'(y+\cos x)$ and $u_y = f'(y+\cos x)$. Thus $u_x + \sin x u_y = 0$, as desired.

The partial differential equation takes the form.
$$Lu = \sum_{\nu=1}^n A_{\nu} \frac{\partial u}{\partial x_{\nu}} + B = 0,$$

The author spends the first three chapters building up the tools necessary for the student to approach partial differential equations (PDEs). In chapter 1 he goes through a brief review of ODEs, teaches the student about changing variables, introduces them to delta functions, Green's functions, and generalized functions/distributions.

A partial differential equation (PDE) is an equation involving one or more partial derivatives of an (unknown) function, call it u , that depends on two or more variables, often time and one or several variables in space. The order of the highest derivative is called the order of the PDE. Just as was the case for ODEs, second-order PDEs will be
