~~And Earthquake~~

Subducting plates, where one tectonic plate is being driven under another, are associated with volcanoes and earthquakes. This activity is focused along the edge of the plate boundary where two plates come into contact, forming regions such as the Pacific Ring of Fire – a chain of

Plate Tectonics

such plate movements, the magma present in the plate boundaries may rise to the Earth's surface, leading to volcanic eruptions.

Divergent plates may cause long volcanic rifts, whereas convergent plates result in individual volcanic eruptions.
