Of Railway Infrastructure  
Maintenance

Abstract. Condition based maintenance scheduling is a promising approach towards effective track possession management in railway transport. If the maintenance tasks arising from condition monitoring and inspection of railways are efficiently scheduled, high service quality and capacity would be assured.

service. Many countries use timetabling software (e.g. Viriato (6), Opentrack (7)) for finding free intervals or periods with less impact to the train operators.

## Scheduling Preventive Railway Maintenance Activities

Abstract. An important aspect of infrastructure management is the scheduling of maintenance tasks, which implies the allocation of tasks to different crews or machines and the determination of an execution order. To this end, different aspects have to be considered. On the one hand, the maintenance

operator is interested in reducing direct maintenance costs, e.g. travel costs.

A railway maintenance scheduling problem with customer ...

Abstract. Before railway track maintenance crews can undertake any work, the allocation of activities to available time intervals in the train schedule as well as to crews must be undertaken. This paper puts forward a model aimed at determining the best allocation of maintenance activities and crews so as to minimise the disruption to and from scheduled trains and to reduce completion

...

Abstract. This work  
addresses a tactical railway  
traffic scheduling problem  
focused on the optimization  
of train sequencing and  
routing decisions and timing  
decisions related to short-  
term maintenance works in a  
railway network subject to  
disturbed process times.  
This is modeled as a mixed-  
integer linear programming  
formulation in which the  
traffic flow and track

Maintenance Tasks, maintenance variables, constraints and objectives are integrated under a stochastic environment.

Integrated stochastic optimization approaches for tactical ...

The pressing necessity to renew infrastructure assets in developed railway systems leads to an increased number of activities to be scheduled annually.

Scheduling of renewal activities for a railway network is a critical task because these activities often require a significant amount of time and create a capacity conflict in operation scheduling. This

## Maintenance Tasks

Survey of railway maintenance activities from a planning ...

Real track incident and inspection datasets were analyzed to raise degradation alarms that initiate the automatic scheduling of maintenance tasks. Optimum scheduling was realized through data analytics and job sequencing heuristic and genetic algorithms, taking into account specific cost & value inputs from comprehensive task cost modelling. Formal face validation was conducted with railway infrastructure specialists and stakeholders.
